
Task 2.10: Presenting Findings to Stakeholders Reflections

Presentation:

[Data Storytelling with Presentations - Tableau Public - Task 2.9 - Data Storytelling with Presentations - 13 December 2023 \(loom.com\)](#)

[Free Data Visualization Software | Tableau Public](#)

Reflections:

1) Were there any limitations that prevented you from conducting an analysis? Think of these in terms of a future project or wish list (i.e., "If I had x, I would have been able to do y.")

- I could not figure out how many medical personnel to send to each state because there was no staff data given to us.

2) Did your data have any limitations that may have affected your results? Consider this in terms of data quality and data bias.

- Influenza Deaths Data Set:
 - ❖ There could be an inaccurate estimate of the actual cause of death
 - ❖ Data contained suppressed values
 - ❖ A lot of the data under the age of 5 was not available
- Census Data Set:
 - ❖ The numbers are estimates and not accurate
 - ❖ Survey data may be incorrect or missing

3) How might you monitor the impact of staffing changes you recommended?

- Tracking the number of deaths in the vulnerable population of those over 65.

4) Is there a metric that could be used for monitoring this impact?

- Influenza mortality rate
